

Lab 7: DAX functions

- 1) Upload and set all relationships to three excel files given (Cookie Types, Customers, Orders)
- 2) Create new measure to find how many cookies were sold
- 3) Create new measure to find how many cookies were sold on holidays (Saturdays and Sundays)
- 4) Create new column which calculates difference between Revenue and Cost. Then your DAX formula should fill 1 if the difference is higher than 1000 and 0 otherwise.
- 5) Create new measure to find how much orders were taken over the weeks (For each week)
- 6) Create new measure to find average amount of sales of cookies
- 7) Show all measures and column in matrix visualization and describe it to your lecturer
